ZINTL® COLOUR RANGE

ZINTL® interlocking aluminium cladding system is offered in a wide range of Interpon and Dulux powder coat finishes, as well as a selection of anodised and wood grain architectural finishes, providing a beautifully refined aesthetic.

With its mix of natural bold and subtle hues, ZINTL® is perfect for a wide range of applications and suits any budget. Its durability makes it particularly well suited for coastal properties and high traffic areas.

All ZINTL® aluminium cladding powder coatings are applied on a project basis with a standard lead time of approximately 14 days.

POWDER COATING INFORMATION

Please refer to the ZINTL® 'Care and Maintenance' brochure for further information regarding specifications and warranties.

ezy HD²

ezy HD² wood effect coating provides maximum definition and maximum durability using the advance powder-on-powder coating system. This system is unique to the Australian market and produces a finish with a realistic look and feel, as well as a superior exterior performance.

ezy HD² finishing was created from technology developed and patented in Italy for the decoration and protection of architectural aluminium with a natural wood effect. **ezy HD² is the first system to obtain a realistic wood effect coating using a powder-on-powder process that ensures high definition and a highly durable finish for your product.**

This cutting-edge technology allows us to capture texture and contrast of wood and apply them to aluminium. ezy HD² coatings on facades, doors, windows, louvres, fencing, decks, and screens, create a sense of the warmth and beauty of wood. **ezy HD² was designed to meet the needs of surfaces that are particularly exposed to UV rays and extreme weather conditions.**

HIGH DEFINITION - a highly defined grain pattern and a texture

HIGHLY DURABLE - excellent resistance to UV radiation and extreme weather

15-YEAR COLOUR AND 25-YEAR FILM WARRANTY

DISCLAIMER: Products in the Interpon Precis and Flat Matt ranges and Dulux Electro ranges vary in their gloss levels and colour across different extrusions and different batches. This is inherent within the coating and is out of the control of the coater. Coating material at different times in these powders will result in variations in the colour and gloss level. HVG Facades recommends coating material for all large projects at the same time to minimise variations. HVG Facades does not take responsibility for colour and gloss variations where these are within the powder suppliers' specification margins.
